S24B360M ULTRASONIC FORK FOR LABEL

SUPPLIED MATERIAL

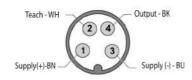

Installation manual

GENERAL DESCRIPTION

- Ultrasonic fork sensor for transparent labels, any opaque material with connector
- · Teach-in models with dynamic and remote teach
- Ultrasonic technology
- Small size easy to locate
- . NPN and PNP, Lo/Do total configurable
- Width slit detection 3 mm
- Depht slit detection 69 mm
- Maximum switching frequency 1500Hz
- · Aluminum case, protected IP65

PLUGS

M8 4 pin

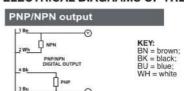

DIMENSIONS Ø4,2 -(2) 1 3 22 47.3 ± 16Te 22,3 ±% Light (NC) Dark (NO) ± 1/2 _ 18 6,5 008 92,5

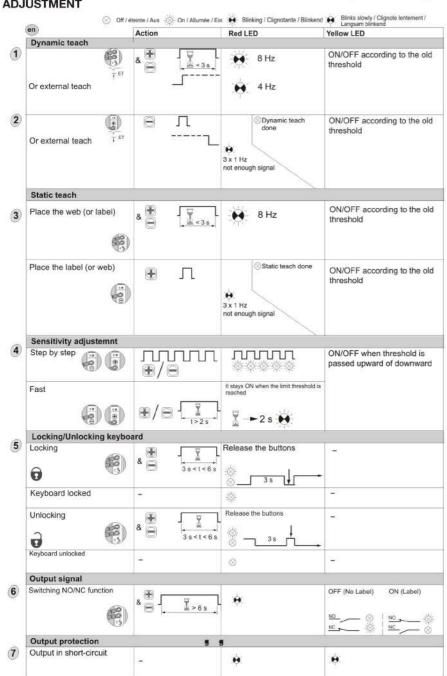

KEY

1 Yellow LED, "ON" when the outputs are set to 1 (conducting) 2 Red LED: Keyboard blocking and settings 3 Setting +/- push button

ADJUSTMENT

TECHNICAL SPECIFICATIONS

| Model | ULS24B360M84 |
|--------------------------------------|--|
| Emission | ultrasonic |
| Minimum lenght of label | 2 mm |
| Minimum distance between 2 label | 2 mm |
| Nominal sensing distance Sn | 3 mm |
| Slot depth detection | 69 mm |
| Maximum flow rate | 180 m/min |
| Detection accurancy | +/- 0.20 mm at 120 m/min |
| Rated Operational voltage Ue | 12 24 Vdc (with protection against reverse polarity) |
| Max ripple content | 10% |
| No-load supply current | 45 mA |
| Load current | 100 mA |
| Output voltage drop | < 2 V @ IL=100 mA |
| Switching frequency f | 1500 Hz |
| Time delay before availability | 300 us max |
| Electrical protection | Short-circuit output protected Interference suppression |
| Operating temperature | +5 + 55 °C |
| Storage temperature | -20 + 70 °C |
| Degree of protection (DIN 40 050) | IP 65 |
| Materials | Painted Aluminum |
| Connector type | M8, 4-pin |
| Weight | Approx. 130 g |

ATTENTION

Make sure that the supply voltage is correctly set with a ripple corresponding to the values indicated on the catalogue. In case the noise produced by the power lines exceeds the values foreseen by the CE norm (interference immunity), separate the sensor cables from both the power and high tension lines and insert it in a grounding metal raceway. Moreover it is advisable to connect the sensor directly to the supply source and not to other devices. To extend the supply and output cables, it is necessary to use a cable having conductors with a minimum size of 1 mm². The maximum length of extension is 100 m (this value is referred to a minimum tension and power supply at the load of 100 mA). In industrial environments, we recommend to use shielded cables in order to prevent possible disturbances on the devices caused by electromagnetic fields induced. Do not expose sensor head to hot water > 50 °C, water steam, acids or solvents. Clean the active face of the sensor with a wet cloth and then dry it.
